Summary

Junior .NET Backend Developer and Computer Science student with hands-on experience building RESTful APIs and web applications using C#, ASP.NET Core, Entity Framework Core, and SQL Server. Experienced in Clean Architecture, authentication and authorization, database design, and backend design patterns. Built projects including a multi-vendor marketplace and clinic management system, focusing on maintainable and scalable backend solutions.

Education

Bachelor of Science in Computer Science

October 6 University, Egypt | 2023 – 2027

CGPA: 3.37 / 4.00

Professional Experience

Full-Stack Web Development Trainee, NTI (National Telecommunication Institute) (July 2025 – August 2025)

- Collaborated with a trainee team to develop backend modules and RESTful APIs using PHP and Laravel across 2+ web applications.
- Designed relational database schemas in MySQL, managing 8+ normalized tables and implementing core CRUD operations.
- Implemented user authentication and authorization features for web applications.
- Built multiple projects applying backend development practices, database design, and API integration.

Software Development Trainee – Full Stack .NET Web Development, DEPI (2026 – Present)

- Currently undergoing intensive training in full-stack web development using the .NET ecosystem.
- Developing backend applications and RESTful APIs using C#, ASP.NET Core, and related technologies.
- Applying software engineering principles, database design, and modern development practices through hands-on projects.

Projects

Multi-Vendor Marketplace – ASP.NET Core MVC [\[GitHub\]](#)

- Engineered a multi-tier e-commerce platform supporting 3 user roles (Admin, Vendor, Customer)
- Applied Clean Architecture to separate application concerns and improve maintainability.
- Implemented authentication and role-based authorization using ASP.NET Core Identity.
- Integrated Stripe API for secure online payment processing.
- Applied Repository and Unit of Work patterns for data access and transaction management.

VitaCare – Clinic Management System | ASP.NET Core Web API [\[GitHub\]](#)

- Developed a RESTful Web API using .NET 10 for managing clinical workflows, medical records, and billing operations.
- Implemented real-time scheduling notifications using Microsoft SignalR.
- Used EF Core database transactions to maintain consistency across multi-step onboarding operations.
- Implemented authentication and role-based authorization using ASP.NET Core Identity and JWT Bearer tokens.
- Configured EF Core Fluent API and delete behaviors to enforce data integrity.
- Configured CORS and authorization to support secure integration between the API and client applications.

Skills

Programming: C#, PHP, SQL, JavaScript, HTML5, CSS3.

Backend: .NET 10, ASP.NET Core MVC, ASP.NET Core Web API, Entity Framework Core, LINQ, SignalR

Architecture & Design: Clean Architecture, SOLID Principles, Repository Pattern, Unit of Work, Dependency Injection

Databases: SQL Server, MySQL, Database Design, Normalization, EF Core Code First, Fluent API

Security & APIs: ASP.NET Core Identity, JWT Bearer Authentication, Role-Based Access Control (RBAC), RESTful APIs

Tools & Integration: Git/GitHub, Postman, Visual Studio, Stripe API, Email Service.

Frontend: HTML5, CSS3, JavaScript, Bootstrap.

Soft Skills & Methodologies: Problem-Solving, Team Collaboration, Technical Communication,

Certifications

- NTI Summer Training – Full Stack PHP [\[certificate\]](#)
- Mahara Tech – Learn PHP & MySQL [\[certificate\]](#)
